

# 241 Series Articulating Lift Arms

## OVERVIEW

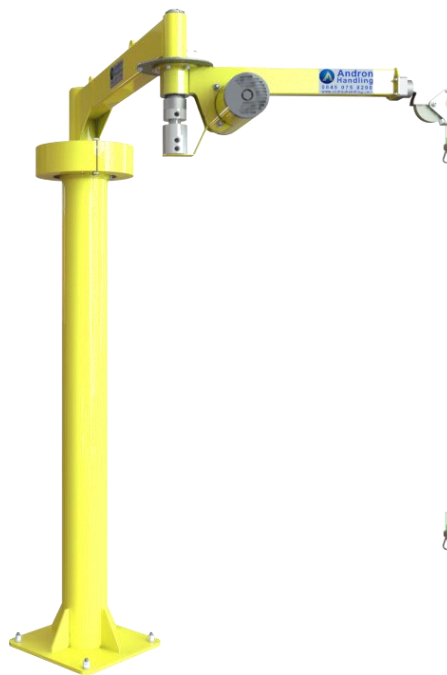

A high-performance alternative to traditional jib cranes, our articulated arms are ideal for light to medium duty lifting applications.

- Free and easy movement of loads from 55kg to 125kg
- Fully pneumatic, with powered and balanced lifting configurations available
- Reaches up to 3500mm, with 360° slewing
- A large range of standard accessories

Our floor mounted 241 series articulated arms include a pneumatic hoist, a range of lift capacities and reach options, and up to 360° slewing of the outer arm for complete freedom of movement.

The outer pulley is a bespoke swivelling design which always aligns with the cable to reduce wear and prevent cable jams and damage.

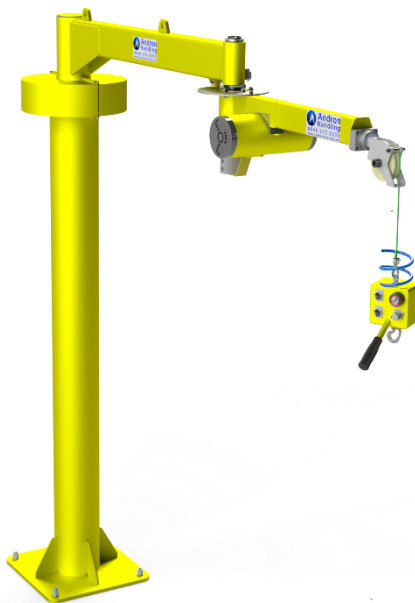

A high-quality pneumatic hoist is integrated into the outer arm, providing powered up/down controls, or alternatively a precise balanced lift mode.
